PROJECTS

Specusol — Solar Energy Market Dashboard

Jan 2026

EnergyHack @ Georgia Tech · Python, Plotly Dash, Leaflet · Live on Render

- Built a deployed dashboard in 36 hours that models surplus Texas (ERCOT) solar energy as a tradeable asset.
- Designed and implemented the ERCOT zone map (pure-Python address-to-zone lookup) and the supply/demand and solar-irradiance visualizations with automatic equilibrium detection.
- Collaborated with one teammate who built the stock-tracking layer; jointly integrated and deployed the final app.

Personal Finance Data Pipeline — Self-Directed

2026 – In progress

Python, pandas, SQLite, Plotly Dash

- Building an end-to-end ETL pipeline that ingests, validates, transforms, and stores transaction data, with z-score anomaly detection and an interactive dashboard; adding pytest tests and GitHub Actions CI.

EXPERIENCE

Georgia Tech, Office of Scholarships & Financial Aid — Student Assistant
